

MAKE YOUR OWN PAPER PLANE LAUNCHER!

WHAT YOU'LL NEED

Step 1, Make the base

Take some flat and regular Lego bricks. You will need these for the base and sides of the launcher. Using flat pieces of Lego, assemble a flat base that is wider than your paper plane. Add some support underneath to give it some strength.

Step 2, Build the stand and sides

Build a stand that is at least 3 pieces high underneath the front of the flat base. This gives the launcher height! Build the sides but leave a space between the bricks on the second level for the rubber band. Don't forget to be creative with your design!

Step 3, Attach the rubber band

Stretch the rubber band, wrap around the base and into the gaps on the sides. Place one last brick over to keep the rubber band secure. Fit a paperclip to the front of your plane, pull back and see how far you can get it!
